WERSI

ADVANCED MEMORY SYSTEM

and Sound Master for DX 400/500

Delta DX 500

Gamma DX 500

Beta DX 400

AMS–Advanced Memory System

This Fall, WERSI is introducing another stroke of genius from its R & D Department, one of the world's largest centers for Research and Development in the music industry.

With the push of a button, larger DMS instruments can now be changed from a pipe organ to a theater organ, or to a complete orchestra or a contemporary instrument. More than 150 Presets are permanently and instantly available.

This of course is in addition to the 57 Factory Presets which remain unchanged and always available.

The new AMS System actually quadruples the number of Custom Voices, Total Presets and all of the Rhythm and Accompaniment patterns.

Here is a comparison – Standard DMS to the new AMS:

Standard DMS	NEW AMS
20 Total Presets	80 Total Presets
18 Custom Voices	76 Custom Voices
32 Rhythm Patterns	128 Rhythm Patterns

The number of available sounds and presets goes far beyond this, but you

no longer need a tape, a cartridge, or a disk.

Everything is contained in your instrument's on-board computer, offering limitless choices, instantaneously.

SM–Sound Master

Whether a sound is good or not is usually determined by whether or not you like it. Only the human ear can determine the quality of sound, and the decision is up to the individual.

For its DMS instruments, WERSI offers the Voice Creating Section in combination with Special Controls and Code Programming.

Now, however, instead of needing to learn all about how to create a new sound, WERSI introduces its SOUND MASTER – the world's first system of automatic Voice Creation. All you need to do is push one button and listen to a completely new voice, created by your instrument itself!

If you like the new voice, you can keep it – if not, hit the button again, . . . and again and again.

Millions of variations are possible – and a Trumpet may become a Mandoline, and a Pipe Organ a Bass sound.

The SOUND MASTER operates randomly, at the speed of light.

The result is a creative, intelligent instrument that never becomes boring. Every time you play, it can be like winning in a lottery. The most fascinating and unusual sounds can now be created.

With the AMS SYSTEM and the SOUND MASTER, WERSI is once again underlining its edge in technology, as well as the fact that a WERSI instrument, due to its updatability, never becomes obsolete.

If you already own a WERSI, all you need to do is to replace one of the plug-in boards inside your instrument. If you are placing your initial order for a new WERSI instrument now, make certain that you order AMS and SM with your instrument right from the beginning.

A totally new experience from a musical instrument is waiting for you!

NEW additional Feature List for DX 400-500 with AMS-Advanced Memory System and SM-Sound Master

1 AMS – Advanced Memory System

Four organs in one – a giant memory makes four times the number of Total Presets, Custom Presets and Rhythm and Accompaniment Presets available, simultaneously.

The world's largest voice memory system makes cartridge, disk and tape memory obsolete. AMS offers you instantaneous access to all of the choices the limitless new DMS System has to offer.

2 SMA – Sound Master Automatic

Instead of learning how to create new voices, the instrument itself will create, at your fingertips, sounds and voices you always wanted, and sounds you've never heard before.

3 SMS – Sound Master Selective

This feature allows you to have your instrument change the character of a sound by only changing the sustain, vibrato or tremolo part of the sound.

Your instrument can do this automatically as well. The sound is not changed entirely, but just slightly to give you more tone variations.

4 Individual Voice Transfer

With the millions of possibilities your instrument has, even the 213 permanently available Presets may not be enough. You can therefore still create your own sound library by using the regular data cassette tapes.

IVT allows you to transfer an individual voice from one program to another, so that you can individualize your selections.

5 ACR – Advanced Chord Recognition and Chord Sequencer

For your automatic rhythm and accompaniment section, WERSI introduces ACR – Advanced Chord Recognition which makes your playing with the automatic section more perfect.

In addition, the WERSI CX4 system also uses the chord sequencer. This allows you to memorize all of your chord changes in advance and lets you concentrate on playing the melody.

6 New Rhythm Sounds and Features

Another new feature the AMS package includes is the Intro/Break feature via footswitch. In addition to the AMS package, you can also order a new set of drum sounds – new snares, new cymbals, new bass drum, etc.

These new sounds will replace the present ones and WERSI recommends this additional update for people who prefer the contemporary style of music. For standard-type music, the present drum sounds are still the best.

7 New MIDI Possibilities

By being fully MIDI implemented, the DX400/500 models open up new avenues through advanced MIDI features which now include triggering the auto accompaniment section from external keyboards via MIDI channel 2.

IMPORTANT: With the AMS System, WERSI's DX400/500 models become even more sophisticated yet easier to operate – and four times as powerful.

ORDER FORM for AMS-SM for DX400/500

AMS - SM - FOR NEW BETA, GAMMA, DELTA ORDERS	
☐ AMS - SM Expansion Kit for DX 400/500	$ 490*
☐ AMS - SM plus Rhythm Expander Expansion Kit for DX 400/500	$ 590*
